DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 5 (renumbered 1 and 2) are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art references of record failed to suggest, disclose, or teach a method of fabricating a multi-fiber polarization maintaining ferrule assembly in which the cover removal step involved the removal of different amounts (specifically few millimeters) of cover material. Cheng substantially teaches the method of the claimed invention, including the steps of exposing the ends of a pair of fibers, arranging said fibers within a holding tube or insertion sleeve, affixing or bonding said fibers to said holding tube, and placing the thus bonded assembly within a ferrule. As noted in the previous rejection, Ohtsuka recognizes the known method in which the optical fibers have slightly different lengths. However, in this instance, the difference appears to be attributed to margin of error and is particularly evidenced by the range between 0.002 and 0.02 millimeters. This difference is extremely different (orders of magnitude) than that required by the claimed invention and as such, one of ordinary skill in the art at the time of the invention would not have found it obvious to practice this technique in the method of Cheng. It is further noted that the claimed technique facilitates insertion of the optical fibers within the ferrule assembly.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
